

OPERATIONAL ANALYSIS OF WEEKLY INFORMATION ON COMMUNICABLE DISEASES IN BULGARIA

Week 9 (24.02.2025 – 02.03.2025)

1. Salmonellosis

The number of reported cases of Salmonellosis during week 9 of 2025 is 8. The deviation from the previous week is (-5).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 92. For the same period of the previous year the number of reported cases is 63. The deviation from the previous year is (29).

2. Lyme disease

The number of reported cases of Lyme disease during week 9 of 2025 is 5. The deviation from the previous week is (1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 26. For the same period of the previous year the number of reported cases is 16. The deviation from the previous year is (10).

3. Gastroenteritis, enterocolitis

The number of reported cases of Gastroenteritis, enterocolitis during week 9 of 2025 is 128. The deviation from the previous week is (0).

The reported cases are classified as: 60 possible, 66 probable and 2 confirmed.

From the beginning of the year the number of reported cases is 1195. For the same period of the previous year the number of reported cases is 998. The deviation from the previous year is (197).

4. E. coli infection – escherichiosis (E.coli)

The number of reported cases of E. coli infection – escherichiosis (E.coli) during week 9 of 2025 is 6. The deviation from the previous week is (-1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 45. For the same period of the previous year the number of reported cases is 46. The deviation from the previous year is (-1).

5. Scarlet fever

The number of reported cases of Scarlet fever during week 9 of 2025 is 117. The deviation from the previous week is (0).

The reported cases are classified as: 41 possible, 53 probable and 23 confirmed.

From the beginning of the year the number of reported cases is 911. For the same period of the previous year the number of reported cases is 2441. The deviation from the previous year is (-1530).

6. Varicella

The number of reported cases of Varicella during week 9 of 2025 is 586. The deviation from the previous week is (-8).

The reported cases are classified as: 67 possible, 431 probable and 88 confirmed.

From the beginning of the year the number of reported cases is 5882. For the same period of the previous year the number of reported cases is 6914. The deviation from the previous year is (-1032).

7. Shigellosis

The number of reported cases of Shigellosis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 2. The deviation from the previous year is (0).

8. Mumps

The number of reported mumps cases during week No 09 of year 2025 is 0. The deviation from the previous week is (0).

From the beginning of year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 2. The deviation from the previous year is (-2).

9. Pertussis

The number of reported cases of Pertussis during week 9 of 2025 is 1. The deviation from the previous week is (-7).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 34. For the same period of the previous year the number of reported cases is 23. The deviation from the previous year is (11).

10. Leptospirosis

The number of reported cases of Leptospirosis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (-1).

11. Botulism

The number of reported cases of Botulism during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

12. Yersiniosis

The number of reported cases of Yersiniosis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 3. For the same period of the previous year the number of reported cases is 6. The deviation from the previous year is (-3).

13. Campylobacteriosis

The number of reported cases of Campylobacteriosis during week 9 of 2025 is 2. The deviation from the previous week is (0).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 34. For the same period of the previous year the number of reported cases is 34. The deviation from the previous year is (0).

14. Typhoid fever

The number of reported cases of Typhoid fever during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

15. Legionnaires` disease

The number of reported cases of Legionnaires` disease during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (1).

16. Rubella

The number of reported rubella cases during week No 09 of year 2025 is 0. The deviation from the previous week is (0). From the beginning of year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

17. Congenital rubella

The number of reported cases of Congenital rubella during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

18. Viral meningitis and meningoencephalitis

The number of reported cases of Viral meningitis and meningoencephalitis during week 9 of 2025 is 0. The deviation from the previous week is (-1). From the beginning of the year the number of reported cases is 20. For the same period of the previous year the number of reported cases is 18. The deviation from the previous year is (2).

19. Crimean-Congo haemorrhagic fever

The number of reported cases of Crimean-Congo haemorrhagic fever during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

20. Mediterranean spotted fever (Boutonneuse fever)

The number of reported cases of Mediterranean spotted fever (Boutonneuse fever) during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

21. Meningococcal infection

The number of reported cases of Meningococcal infection during week 9 of 2025 is 1. The deviation from the previous week is (1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 5. For the same period of the previous year the number of reported cases is 3. The deviation from the previous year is (2).

22. Listeriosis

The number of reported cases of Listeriosis during week 9 of 2025 is 0. The deviation from the previous week is (-1). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 4. The deviation from the previous year is (-2).

23. Brucellosis

The number of reported cases of Brucellosis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 4. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (4).

24. Tularaemia

The number of reported cases of Tularaemia during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (-1).

25. Acute viral hepatitis ABCDEN

The number of reported cases of Acute viral hepatitis ABCDEN during week 9 of 2025 is 30. The deviation from the previous week is (7).

The reported cases are classified as: 4 possible, 2 probable and 24 confirmed.

From the beginning of the year the number of reported cases is 173. For the same period of the previous year the number of reported cases is 104. The deviation from the previous year is (69).

26. Hemorrhagic fever with renal syndrome

The number of reported cases of Hemorrhagic fever with renal syndrome during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

27. Q fever

The number of reported cases of Q fever during week 9 of 2025 is 1. The deviation from the previous week is (0).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 7. For the same period of the previous year the number of reported cases is 8. The deviation from the previous year is (-1).

28. Ornithosis

The number of reported cases of Ornithosis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

29. Tetanus

The number of reported cases of Tetanus during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

30. Anthrax

The number of reported cases of Anthrax during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

31. *Pneumococcal meningitis*

The number of reported cases of Pneumococcal meningitis during week 9 of 2025 is 1. The deviation from the previous week is (-1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 7. For the same period of the previous year the number of reported cases is 8. The deviation from the previous year is (-1).

32. *Streptococcal meningitis*

The number of reported cases of Streptococcal meningitis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 1. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (1).

33. *Haemophilus influenzae meningitis*

The number of reported cases of Haemophilus influenzae meningitis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 1. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (1).

34. *Bacterial meningitis (other bacteria)*

The number of reported cases of Bacterial meningitis (other bacteria) during week 9 of 2025 is 1. The deviation from the previous week is (0).

The reported cases are classified as probable.

From the beginning of the year the number of reported cases is 15. For the same period of the previous year the number of reported cases is 8. The deviation from the previous year is (7).

35. *Rotavirus gastroenteritis*

The number of reported cases of Rotavirus gastroenteritis during week 9 of 2025 is 14. The deviation from the previous week is (-2).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 187. For the same period of the previous year the number of reported cases is 62. The deviation from the previous year is (125).

36. *Measles*

The number of reported measles cases during week No 09 of year 2025 is 0. The deviation from the previous week is (0).

From the beginning of year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

37. *SHIGA/VERO toxin producing E. coli infection (STEC/VTEC)*

The number of reported cases of SHIGA/VERO toxin producing E. coli infection (STEC/VTEC) during week 9 of 2025 is 0. The deviation from the previous week is (-1). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (2).

38. *West Nile virus*

The number of reported cases of West Nile virus during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

39. Tick-borne Encephalitis

The number of reported cases of Tick-borne Encephalitis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

40. Pneumococcal invasive disease

The number of reported cases of Pneumococcal invasive disease during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

41. Variant of Creutzfeldt-Jakob

The number of reported cases of Variant of Creutzfeldt-Jakob during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

42. COVID-19

The number of reported cases of COVID-19 during week 9 of 2025 is 14. The deviation from the previous week is (6).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 230. For the same period of the previous year the number of reported cases is 5108. The deviation from the previous year is (-4878).

43. Lyme neuroborreliosis

The number of reported cases of Lyme neuroborreliosis during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

44. Monkeypox

The number of reported cases of Monkeypox during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (2).

45. Denga

The number of reported cases of Denga during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 1. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (0).

46. Cholera

The number of reported cases of Cholera during week 9 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

47. HIV

The number of reported cases of HIV during week 9 of 2025 is 3. The deviation from the previous week is (-3).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 52. For the same period of the previous year the number of reported cases is 44. The deviation from the previous year is (8).

48. Gonorrhea

The number of reported cases of Gonorrhea during week 9 of 2025 is 3. The deviation from the previous week is (2).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 13. For the same period of the previous year the number of reported cases is 15. The deviation from the previous year is (-2).

49. Chlamydial Infection

The number of reported cases of Chlamydial Infection during week 9 of 2025 is 5. The deviation from the previous week is (4).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 26. For the same period of the previous year the number of reported cases is 13. The deviation from the previous year is (13).

50. Syphilis

The number of reported cases of Syphilis during week 9 of 2025 is 8. The deviation from the previous week is (-2).

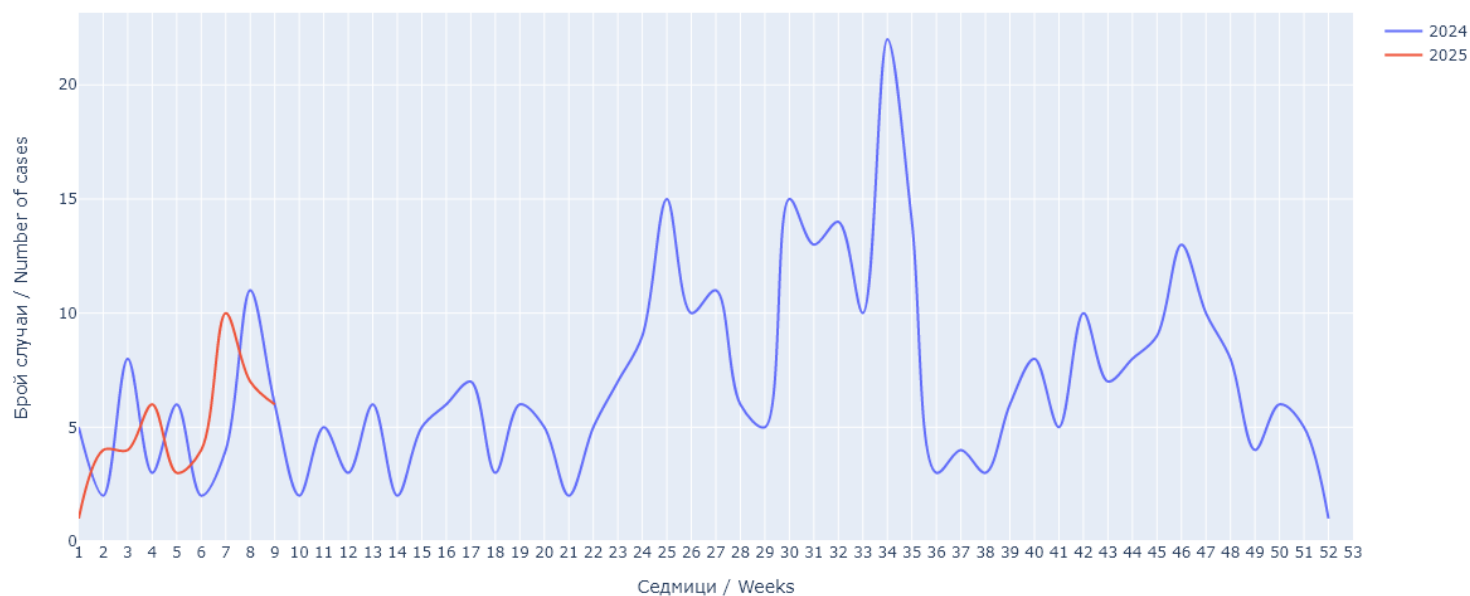

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 74. For the same period of the previous year the number of reported cases is 73. The deviation from the previous year is (1).

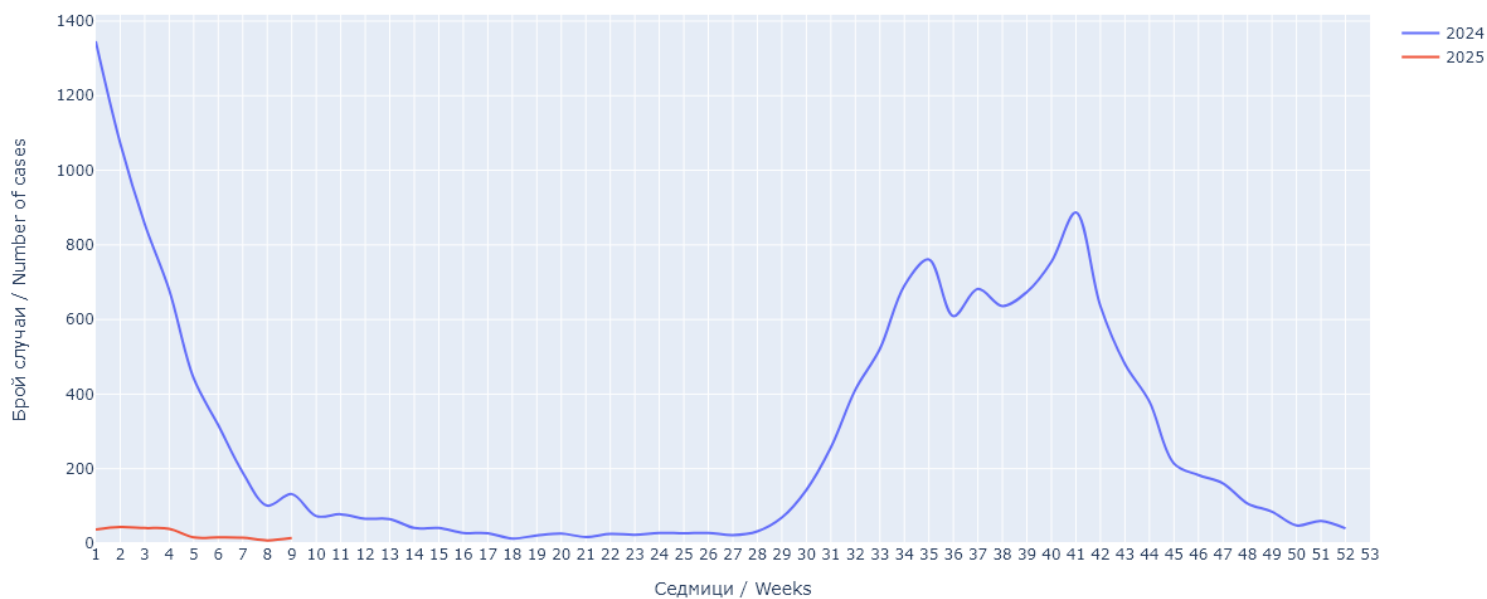

51. Congenital Syphilis

The number of reported cases of Congenital Syphilis during week 9 of 2025 is 0. The deviation from the previous week is (-3). From the beginning of the year the number of reported cases is 6. For the same period of the previous year the number of reported cases is 4. The deviation from the previous year is (2).

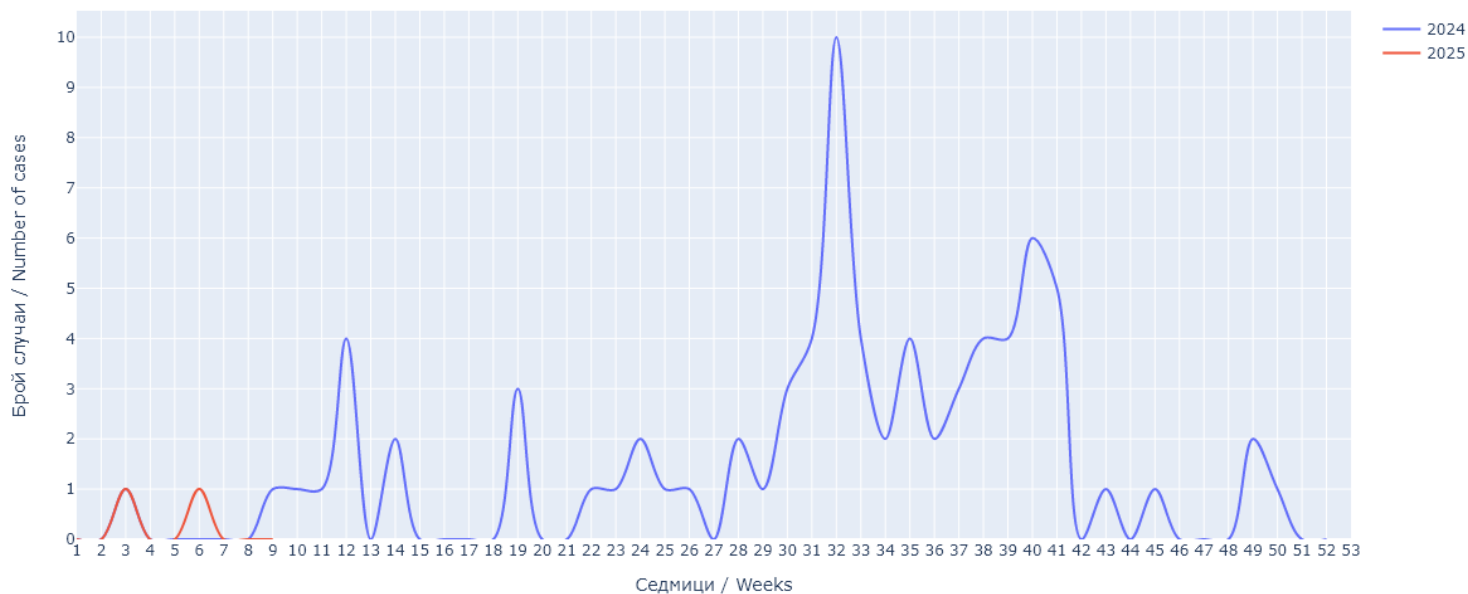

Регистрирани случаи на Колиентерити (ешерихиози) по седмици в Република България
 Reported number of cases of E. coli infection – escherichiosis (E.coli) by weeks in Bulgaria

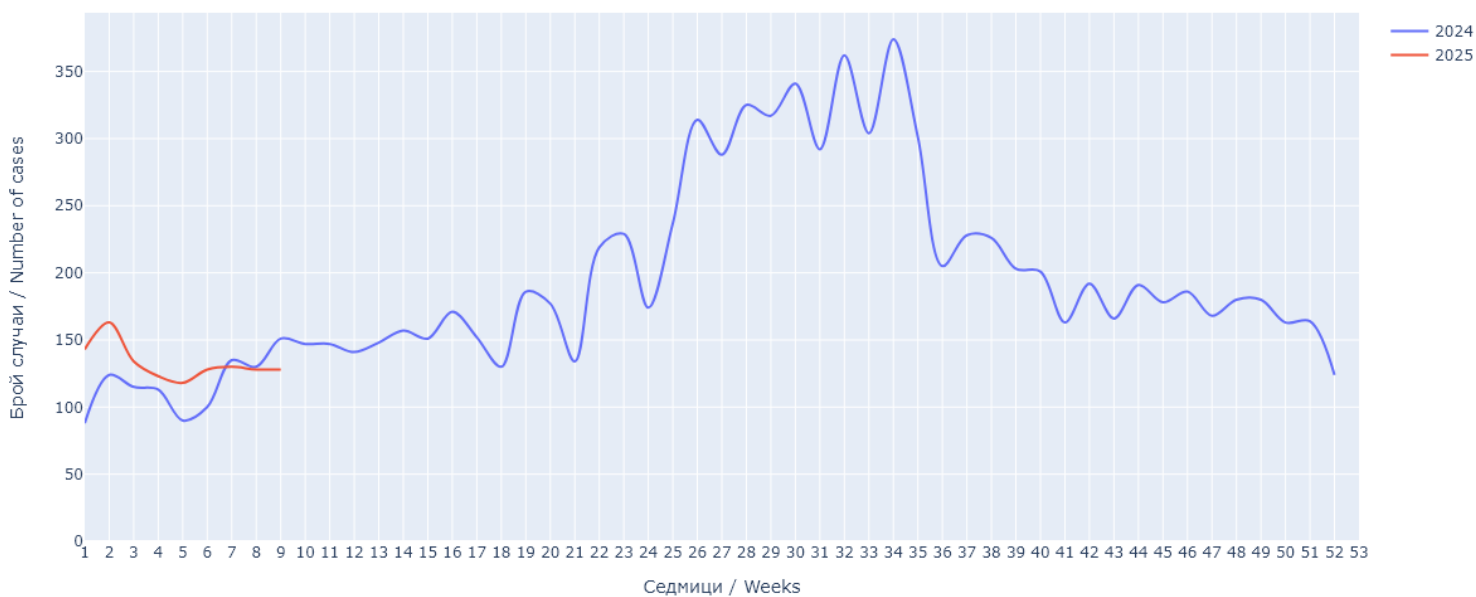

Регистрирани случаи на COVID-19 по седмици в Република България
 Reported number of cases of COVID-19 by weeks in Bulgaria

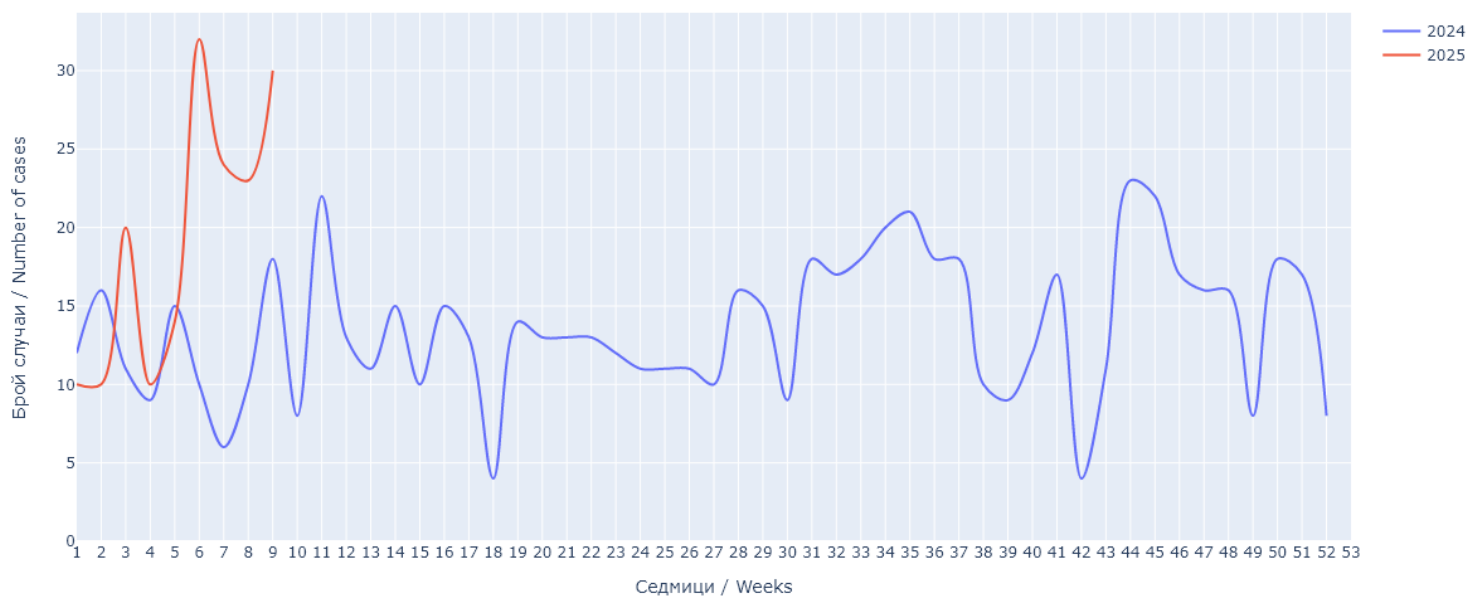

Регистрирани случаи на Дизентерия (шигелоза) по седмици в Република България
 Reported number of cases of Shigellosis by weeks in Bulgaria

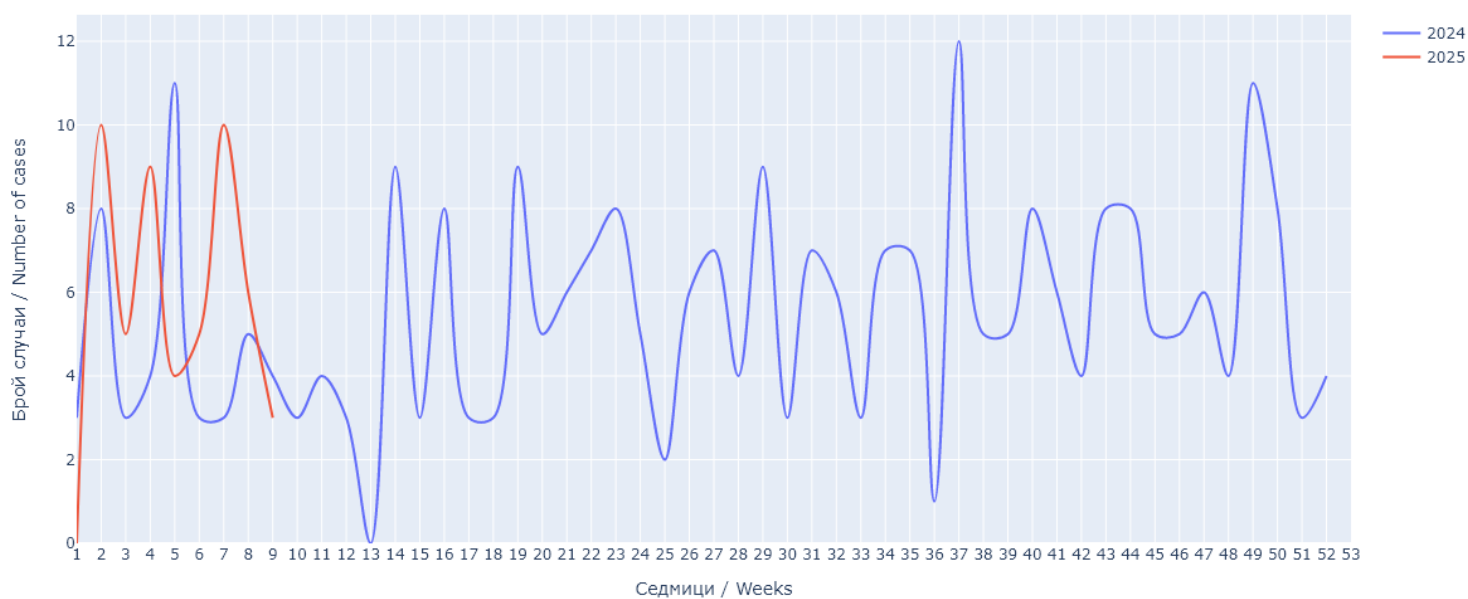

Регистрирани случаи на Гастроентерит, ентероколит по седмици в Република България
 Reported number of cases of Gastroenteritis, enterocolitis by weeks in Bulgaria

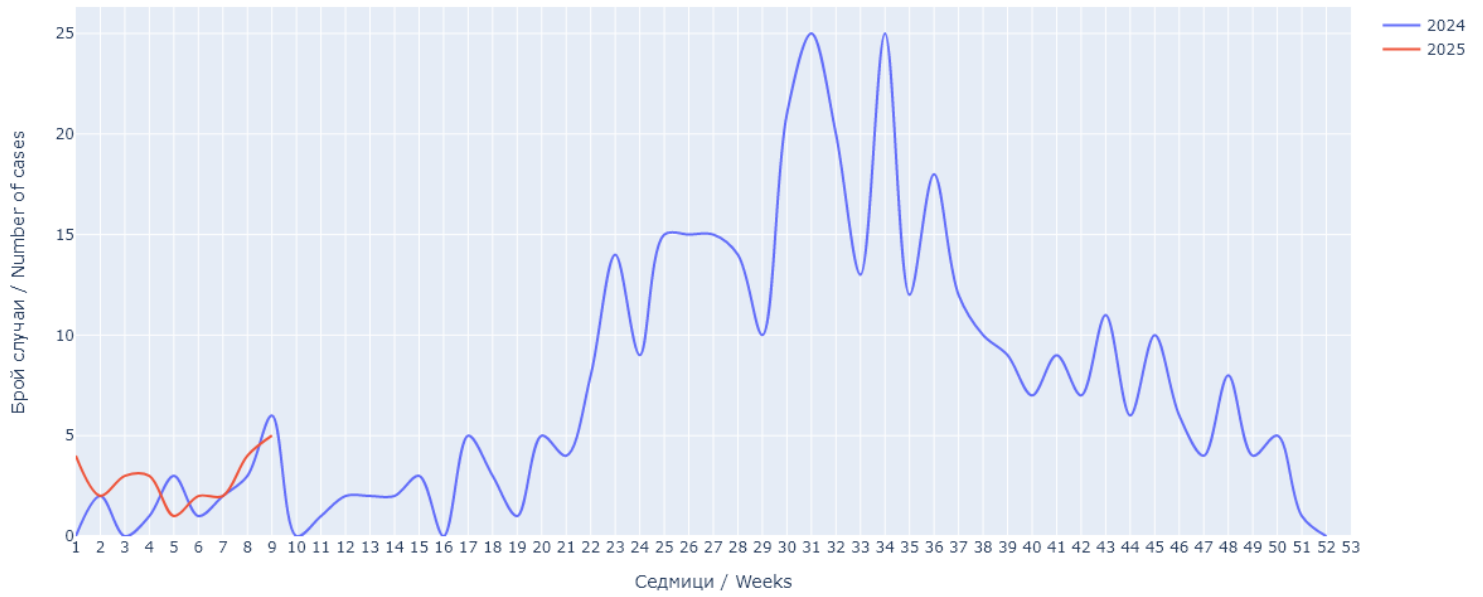

Регистрирани случаи на Остър вирусен хепатит ABCDE по седмици в Република България
 Reported number of cases of Acute viral hepatitis ABCDEN by weeks in Bulgaria

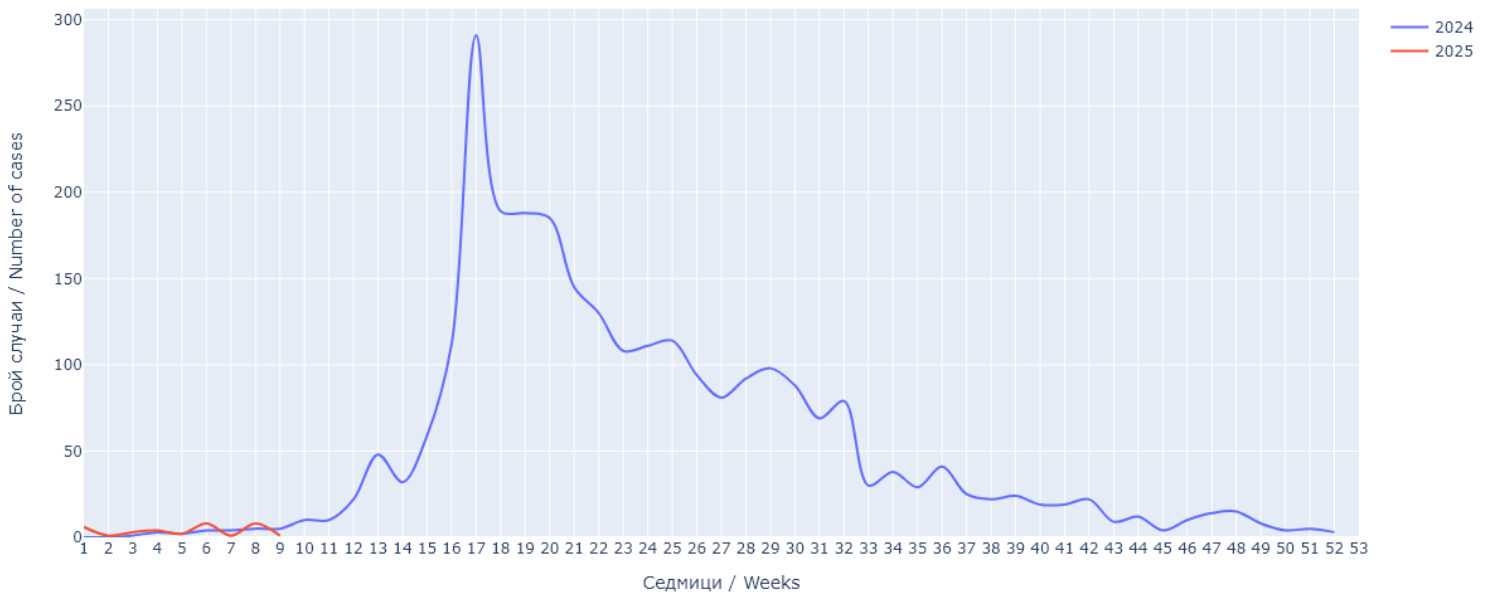

Регистрирани случаи на HIV по седмици в Република България
 Reported number of cases of HIV by weeks in Bulgaria

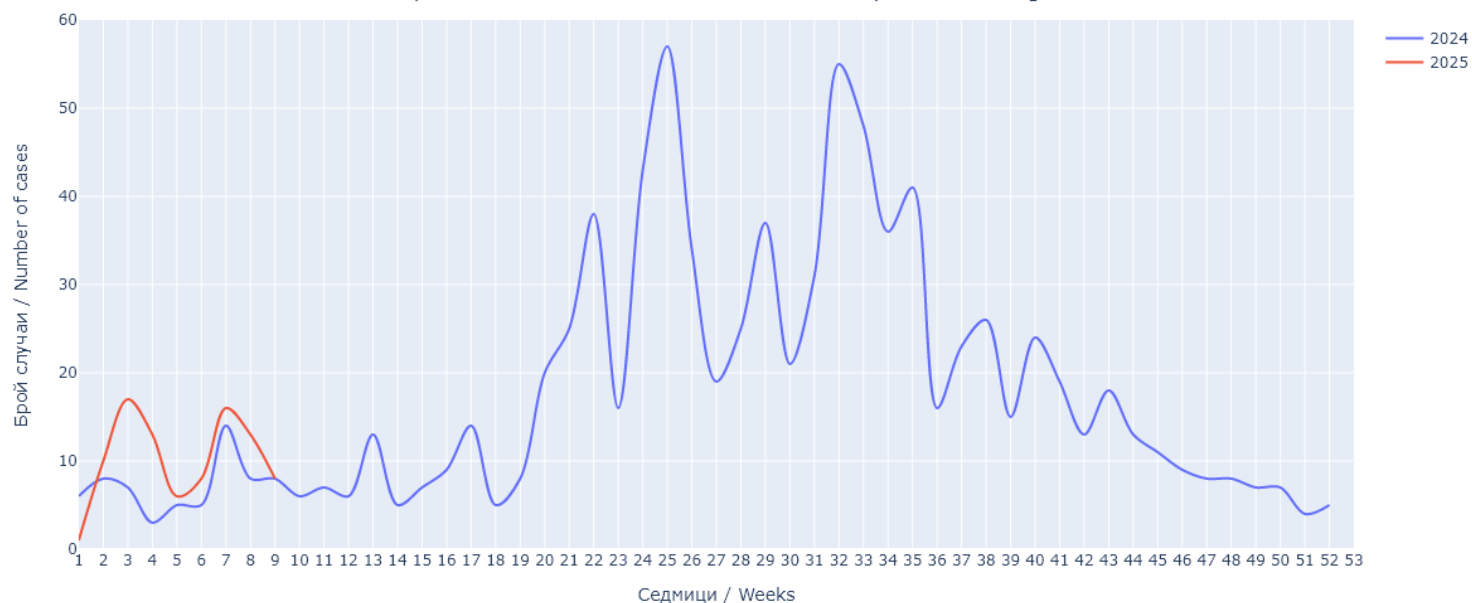

Регистрирани случаи на Лаймска борелиоза по седмици в Република България
Reported number of cases of Lyme disease by weeks in Bulgaria

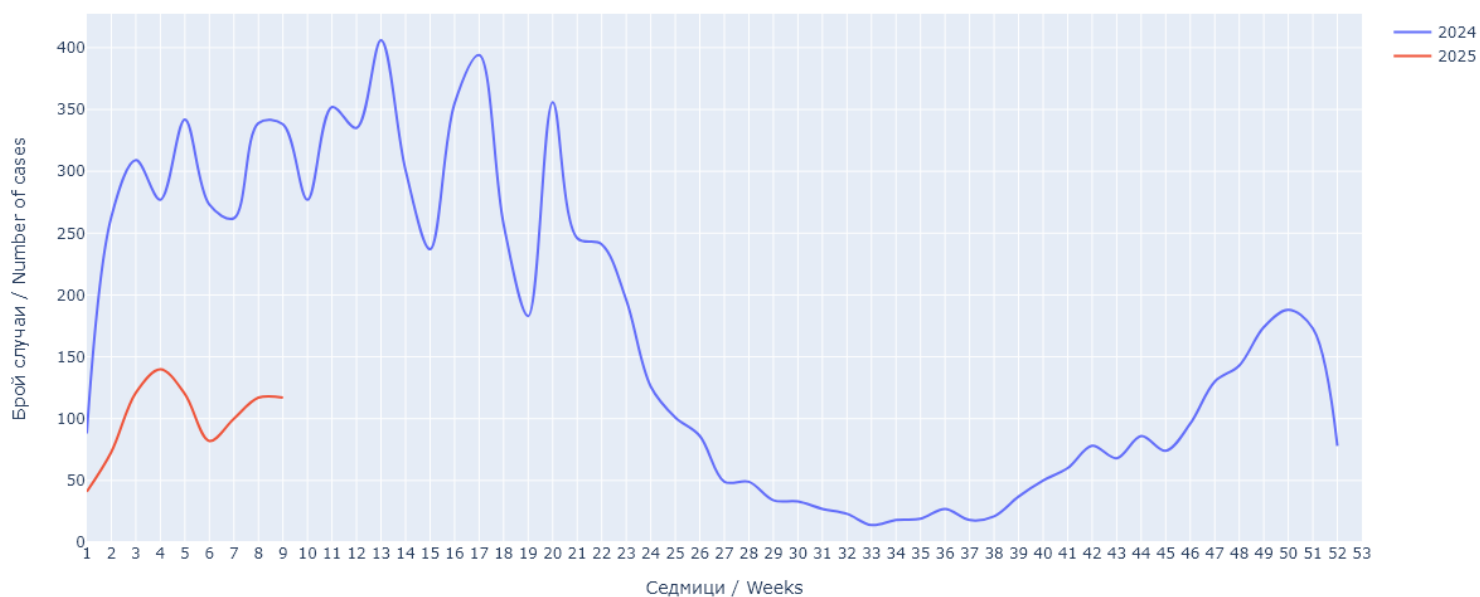

Регистрирани случаи на Коклюш по седмици в Република България
Reported number of cases of Pertussis by weeks in Bulgaria

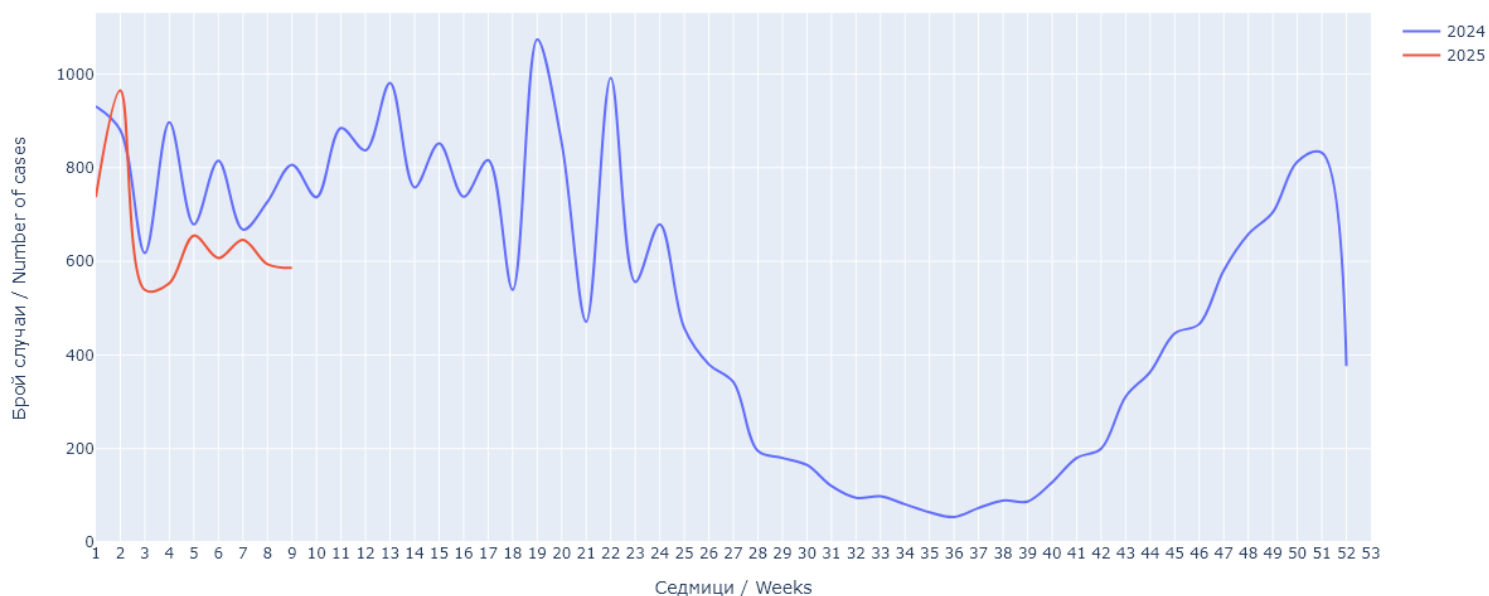

Регистрирани случаи на Салмонелоза по седмици в Република България
Reported number of cases of Salmonellosis by weeks in Bulgaria

Регистрирани случаи на Скарлатина по седмици в Република България
Reported number of cases of Scarlet fever by weeks in Bulgaria

Регистрирани случаи на Варицела по седмици в Република България
Reported number of cases of Varicella by weeks in Bulgaria

Регистрирани случаи на Вирусни менингити и менингоенцефалити по седмици в Република България
Reported number of cases of Viral meningitis and meningoencephalitis by weeks in Bulgaria
