The reported cases are classified as: 26 possible, 38 probable and 17 confirmed.

From the beginning of the year the number of reported cases is 1512. For the same period of the previous year the number of reported cases is 4347. The deviation from the previous year is (-2835).

Регистрирани случаи на Скарлатина по седмици в Република България
Reported number of cases of Scarlet fever by weeks in Bulgaria

6. Varicella

The number of reported cases of Varicella during week 15 of 2025 is 657. The deviation from the previous week is (118).

The reported cases are classified as: 57 possible, 552 probable and 48 confirmed.

From the beginning of the year the number of reported cases is 9564. For the same period of the previous year the number of reported cases is 11914. The deviation from the previous year is (-2350).

Регистрирани случаи на Варицела по седмици в Република България
Reported number of cases of Varicella by weeks in Bulgaria

7. Shigellosis

The number of reported cases of Shigellosis during week 15 of 2025 is 0. The deviation from the previous week is (-2). From the beginning of the year the number of reported cases is 6. For the same period of the previous year the number of reported cases is 10. The deviation from the previous year is (-4).

Регистрирани случаи на Дизентерия (шигелоза) по седмици в Република България
Reported number of cases of Shigellosis by weeks in Bulgaria

8. Mumps

The number of reported mumps cases during week No 15 of year 2025 is 0. The deviation from the previous week is (0). From the beginning of year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 8. The deviation from the previous year is (-8).

9. Pertussis

The number of reported cases of Pertussis during week 15 of 2025 is 0. The deviation from the previous week is (-4). From the beginning of the year the number of reported cases is 45. For the same period of the previous year the number of reported cases is 193. The deviation from the previous year is (-148).

Регистрирани случаи на Коклюш по седмици в Република България
Reported number of cases of Pertussis by weeks in Bulgaria

10. Leptospirosis

The number of reported cases of Leptospirosis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (-1).

11. Botulism

The number of reported cases of Botulism during week 15 of 2025 is 1. The deviation from the previous week is (1). The reported cases are classified as probable. From the beginning of the year the number of reported cases is 1. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (1).

12. Yersiniosis

The number of reported cases of Yersiniosis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 4. For the same period of the previous year the number of reported cases is 7. The deviation from the previous year is (-3).

13. Campylobacteriosis

The number of reported cases of Campylobacteriosis during week 15 of 2025 is 4. The deviation from the previous week is (1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 58. For the same period of the previous year the number of reported cases is 70. The deviation from the previous year is (-12).

14. Typhoid fever

The number of reported cases of Typhoid fever during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (-1).

15. Legionnaires` disease

The number of reported cases of Legionnaires` disease during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 3. The deviation from the previous year is (-1).

16. Rubella

The number of reported rubella cases during week No 15 of year 2025 is 0. The deviation from the previous week is (0). From the beginning of year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

17. Congenital rubella

The number of reported cases of Congenital rubella during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

18. Viral meningitis and meningoencephalitis

The number of reported cases of Viral meningitis and meningoencephalitis during week 15 of 2025 is 1. The deviation from the previous week is (-1).

The reported cases are classified as probable.

From the beginning of the year the number of reported cases is 27. For the same period of the previous year the number of reported cases is 25. The deviation from the previous year is (2).

Регистрирани случаи на Вирусни менингити и менингоенцефалити по седмици в Република България
Reported number of cases of Viral meningitis and meningoencephalitis by weeks in Bulgaria

19. Crimean-Congo haemorrhagic fever

The number of reported cases of Crimean-Congo haemorrhagic fever during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

20. Mediterranean spotted fever (Boutonneuse fever)

The number of reported cases of Mediterranean spotted fever (Boutonneuse fever) during week 15 of 2025 is 0. The deviation from the previous week is (-1). From the beginning of the year the number of reported cases is 1. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (0).

21. Meningococcal infection

The number of reported cases of Meningococcal infection during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 10. For the same period of the previous year the number of reported cases is 3. The deviation from the previous year is (7).

22. Listeriosis

The number of reported cases of Listeriosis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 5. The deviation from the previous year is (-3).

23. Brucellosis

The number of reported cases of Brucellosis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 4. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (4).

24. Tularaemia

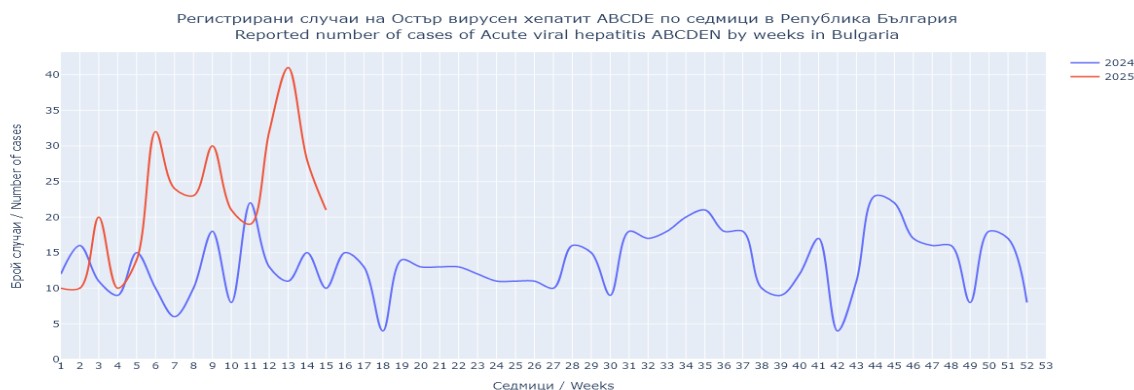

The number of reported cases of Tularaemia during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (-1).

25. Acute viral hepatitis ABCDEN

The number of reported cases of Acute viral hepatitis ABCDEN during week 15 of 2025 is 21. The deviation from the previous week is (-7).

The reported cases are classified as: 3 probable and 18 confirmed.

From the beginning of the year the number of reported cases is 335. For the same period of the previous year the number of reported cases is 185. The deviation from the previous year is (150).

26. Hemorrhagic fever with renal syndrome

The number of reported cases of Hemorrhagic fever with renal syndrome during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (-1).

27. Q fever

The number of reported cases of Q fever during week 15 of 2025 is 0. The deviation from the previous week is (-2). From the beginning of the year the number of reported cases is 14. For the same period of the previous year the number of reported cases is 10. The deviation from the previous year is (4).

28. Ornithosis

The number of reported cases of Ornithosis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

29. Tetanus

The number of reported cases of Tetanus during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

30. Anthrax

The number of reported cases of Anthrax during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

31. Pneumococcal meningitis

The number of reported cases of Pneumococcal meningitis during week 15 of 2025 is 1. The deviation from the previous week is (-1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 11. For the same period of the previous year the number of reported cases is 10. The deviation from the previous year is (1).

32. *Streptococcal meningitis*

The number of reported cases of Streptococcal meningitis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (1).

33. *Haemophilus influenzae meningitis*

The number of reported cases of Haemophilus influenzae meningitis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (1).

34. *Bacterial meningitis (other bacteria)*

The number of reported cases of Bacterial meningitis (other bacteria) during week 15 of 2025 is 0. The deviation from the previous week is (-3). From the beginning of the year the number of reported cases is 20. For the same period of the previous year the number of reported cases is 16. The deviation from the previous year is (4).

35. *Rotavirus gastroenteritis*

The number of reported cases of Rotavirus gastroenteritis during week 15 of 2025 is 15. The deviation from the previous week is (2).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 295. For the same period of the previous year the number of reported cases is 126. The deviation from the previous year is (169).

36. *Measles*

The number of reported measles cases during week No 15 of year 2025 is 0. The deviation from the previous week is (0). From the beginning of year the number of reported cases is 1. For the same period of the previous year the number of reported cases is 1. The deviation from the previous year is (0).

37. *SHIGA/VERO toxin producing E. coli infection (STEC/VTEC)*

The number of reported cases of SHIGA/VERO toxin producing E. coli infection (STEC/VTEC) during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (2).

38. *West Nile virus*

The number of reported cases of West Nile virus during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

39. *Tick-borne Encephalitis*

The number of reported cases of Tick-borne Encephalitis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

40. *Pneumococcal invasive disease*

The number of reported cases of Pneumococcal invasive disease during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

41. *Variant of Creutzfeld-Jakob*

The number of reported cases of Variant of Creutzfeld-Jakob during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

42. *COVID-19*

The number of reported cases of COVID-19 during week 15 of 2025 is 6. The deviation from the previous week is (-1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 271. For the same period of the previous year the number of reported cases is 5498. The deviation from the previous year is (-5227).

43. *Lyme neuroborreliosis*

The number of reported cases of Lyme neuroborreliosis during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

44. *Monkeypox*

The number of reported cases of Monkeypox during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (2).

45. *Denga*

The number of reported cases of Denga during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 2. For the same period of the previous year the number of reported cases is 3. The deviation from the previous year is (-1).

46. Cholera

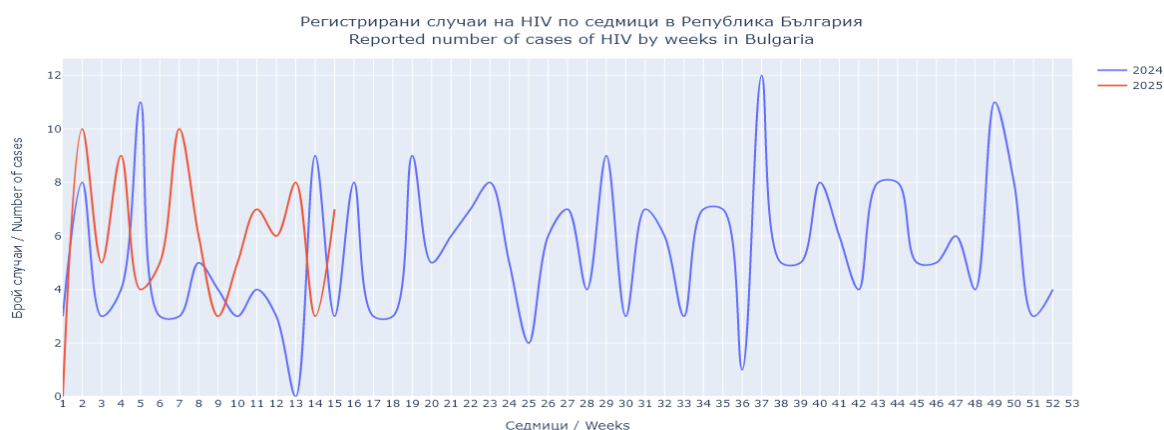

The number of reported cases of Cholera during week 15 of 2025 is 0. The deviation from the previous week is (0). From the beginning of the year the number of reported cases is 0. For the same period of the previous year the number of reported cases is 0. The deviation from the previous year is (0).

47. HIV

The number of reported cases of HIV during week 15 of 2025 is 7. The deviation from the previous week is (2).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 90. For the same period of the previous year the number of reported cases is 66. The deviation from the previous year is (24).

48. Gonorrhoea

The number of reported cases of Gonorrhoea during week 15 of 2025 is 3. The deviation from the previous week is (2).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 22. For the same period of the previous year the number of reported cases is 25. The deviation from the previous year is (-3).

49. Chlamydial Infection

The number of reported cases of Chlamydial Infection during week 15 of 2025 is 0. The deviation from the previous week is (-5). From the beginning of the year the number of reported cases is 43. For the same period of the previous year the number of reported cases is 25. The deviation from the previous year is (18).

50. Syphilis

The number of reported cases of Syphilis during week 15 of 2025 is 4. The deviation from the previous week is (-4).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 115. For the same period of the previous year the number of reported cases is 122. The deviation from the previous year is (-7).

51. Congenital Syphilis

The number of reported cases of Congenital Syphilis during week 15 of 2025 is 1. The deviation from the previous week is (1).

The reported cases are classified as confirmed.

From the beginning of the year the number of reported cases is 10. For the same period of the previous year the number of reported cases is 6. The deviation from the previous year is (4).
